Conflict sensitivity assessment

Why use this tool?
Conflict can be open and obvious, or more subtle and hidden. It may involve countries or regions, or may be more localised within communities or even households. As communities begin to mobilise, relationships and situations can be transformed. However, our actions can have negative as well as positive impacts. If there are underlying conflicts that have the potential to erupt into violent conflict, then there is a risk that our actions could make things worse and make violence more likely. Without knowing, we might be doing harm. It is therefore important to analyse both the context within which we are working, and our actions, to see how we are influencing these issues. This ensures that our actions are ‘conflict sensitive’ and not accidentally causing harm.

A brief description
A list of questions for a group to work through and discuss together.

Time taken
Any conflict sensitivity assessment is always better than no conflict sensitivity assessment and how long it takes may depend on what time is available. Depending on the complexity of the project and the context a full assessment may take between half a day and three days.

You will need
- Space to meet and discuss ideas safely
- Pens and paper

There are several Reveal tools to help plan projects in conflict settings. We suggest they are carried out in the following order:
- C2 - Conflict analysis
- C2 - Conflict sensitivity assessment
- C2 - Planning projects and actions - a conflict sensitivity checklist
Keys to success

Be sensitive and wise
Be aware of the impacts that discussing conflict issues may have on people and relationships. Issues relating to conflict can be very sensitive and, unless they are approached with an open and non-judgemental attitude, activities could end up causing more harm than good. If discussing a particular conflict-related issue could put someone or a group of people at risk, then think very carefully before starting any discussions. If this is the case, it might be safer to do this activity on your own, or in a smaller group.

Ensure participation and inclusion
Ensure that the perspectives of both women and men are included in any analysis. Include as many different people as possible in the discussions, such as people of different ethnicity, religion, age or livelihoods. If the conflict is not too intense, it may even be possible to include representatives from different sides of the conflict in the assessment, but this should only be done if it is not going to make the situation worse.

Let the community decide the pace
The process needs to be carried out at the pace of the people involved, or they are unlikely to see the benefit. Therefore, as a facilitator, you should not be the one driving the agenda, but should let those involved decide how much time to spend on each stage of assessment.

When and how often should you do a conflict sensitivity assessment?
A conflict sensitivity assessment should be done when planning a project where there is the potential for violence within the community or between one community and another (please see Section A2 of Reveal for a series of tools which address the specific issue of violence against women and girls (VAWG)). The assessment looks at how the project will impact the relationships between people and groups in the area. Relationships change and so this should be repeated throughout the life of the project. How often the assessment is carried out will depend on how serious the conflict is, but it is good practice to review the thinking within the assessment every three months. The assessment should also be reviewed following any major changes in the nature of the conflict.
What to do

There are many tools available for conflict sensitivity assessments. The following steps are taken from the “Do No Harm” Framework developed by the Collaborative for Development Action (CDA). The full handbook can be found on the CDA website. See the ‘Finding out more’ section below for more information.

Many of the questions in Steps 1 - 3 are similar to questions in Tool C2: Conflict analysis. If you have already carried out a Conflict analysis, please use the information gathered during that process to answer the questions below.

Step 1: Identify the conflict
Conflicts exist in any community. Most of the time, they do not lead to violence and differences are resolved peacefully. The first step therefore looks to see which conflicts that exist in the community might become dangerous or violent.

- What are the different groups within and around the community (or project area)?
- What tensions currently exist between these groups?
- What tensions could develop between these groups?
- Is there any history of violence between groups? What was the cause or basis of this violence?
- Which of these existing or potential tensions could lead to violence during the course of the project?

Step 2: Identify the dividers and tensions
The next stage is to examine the context and to identify what it is that divides the conflict actors (the different groups) and what things create or deepen tension between groups.

- What are the current threats to peace and stability here?
- What causes the level of tension between groups to increase?
- What has led to violence in the past?
Step 3: Identify connectors and local capacities for peace
The third step is to look for the positives. What is it that, despite the tensions, brings people together? What do they connect over? What are their shared interests? It is also important to look for abilities, skills, practices or capacities that can be used to generate peace.

- What things currently support peace and stability here?
- What causes the level of tension between groups to decrease?
- What has calmed or prevented any outbreaks of violence in the past?

Step 4: Understand the project or programme
Having looked at the context the fourth step is to look at the project. Why is it being done, who is it focused on, and where? The details are important.

- What are the needs that this project is trying to address?
  - Why did we choose these needs?
  - Whose views did we draw on to identify these needs? Whose views were not included?
- Why are we doing this project now? Why is this the right time?
- How long will the project last?
- Where are we planning to work?
  - Why did we choose these locations and not others?
  - Which areas were left out and why?
- What resources (if any) are we bringing into the project environment?
- If we are purchasing resources for the project, where are we purchasing them from?
  - How did we choose these suppliers?
  - Why did we choose these and not others?
- Who are the beneficiaries?
  - Why and how did we choose them and not others?
  - Who was left out and why?
- How exactly will we be delivering the project?

Step 5: Understand the project’s impact on the dividers and connectors
Once you have a good understanding of both the context and the project, the next step is to explore how the project interacts with the dividers and connectors identified in steps two and three. It asks who wins and who loses as a result of this project.

- Who is likely to gain from the project? Who is likely to lose from the project? Think in terms of:
  - Political factors (power, voice, influence)
  - Economic factors (trade, jobs, income)
  - Social factors (access to services such as health, education etc., the ability to maintain cultural and religious practices, language)
  - Technological factors (skills transfer, knowledge, expertise, access to information, access to communications)
  - Legal factors (human rights, protection of minorities, anti-discrimination)
  - Environmental factors (access to land, water or other natural resources, infrastructure such as roads and markets, protection from the effects of climate change)
• What impact will the project have on the dividers and tensions identified in step two? Will it make any of these worse or will it make any better? What impact will the project have on the connectors and local capacities for peace identified in step 3? Will it make any of these stronger or make any of them weaker?

• If we are bringing in resources, what impact will they have on the dividers and connectors?

• How will different groups feel about the project?

Step 6: Identify conflict sensitive alternatives
With the information gathered, Step 6 looks at how the project might be changed to reduce any unhelpful impact on the dividers whilst maximising any positive impact on the connectors.

• Identify possible alternative ways of delivering the project. Brainstorm as many different options as possible - the more options that you generate the more good options you are likely to come up with.

Step 7: Test and redesign
The final step is to choose which of the alternatives to adopt, and to amend the project to include these changes. Once done, the revised and updated project should be tested to confirm that the revised project does no harm.

• Select the best options and redesign the project as required to include these changes.

• Once done, review the new project and make sure that the changes will not cause any new tensions.
